Palm based application for car park ticketing. The system has the capability of issuing official receipts. Reports Generation is available at the end of the day.

In most metro cities, police and traffic officers issue about 10,000 tickets a month for traffic, illegal parking, or other minor violations. This volume comes out to an average of 10-30 tickets a day per officer. At present, officers write on conventional paper tickets that need to be gathered up and sent over to the traffic offices and/or traffic courts, then entered manually into the computer systems. Often times the manual entries take several days after the infringement causing problems and delays. Problems in data entry errors and/or misinterpretation due to illegible handwriting also cause multiple problems.

Office staff at police / traffic headquarters hand collate the tickets for a daily/weekly/monthly summary of citations issued, more often there is no searchable database to find specific citation information.
