

Total Works Management System (TWMS)

Total Works Management System (TWMS) is a full inventory and asset management system. This system provides powerful, flexible and cost-effective inventory control functionality. Additionally, **TWMS** monitors all major steps in the inventory life cycle.

TWMS aims to improve and enhance the capabilities of the existing Inventory System. These enhancements shall improve the data processing mechanism and monitoring of the deliveries, thereby hastening client transaction, business operations, and report generation.

The **TWMS** is a database system to support Water Utility Sector operations. The system maintains information about warehouse stock movement, incoming and outgoing deliveries. **TWMS** is also aimed to support queries and generate various reports as required by Water Utility Sector.

GENERATED REPORTS

- Clients
- Suppliers
- Brokers
- Deliveries
 - ✓ Delivery Schedule
 - ✓ List of deliveries per Product
 - ✓ List of deliveries per Client
- Materials
